

Kolawole Inioluwa Samson

Frontend Engineer | Software Developer

Lagos, Nigeria | github.com/Bossz-web | x.com/Ololade_dev

PROFESSIONAL SUMMARY

Results-driven Frontend Engineer and Software Developer with 1+ years of professional experience building complex, feature-rich web applications in the fintech space. Specialised in **React, Next.js, TypeScript, and Tailwind CSS**, with a proven track record of delivering high-impact features — including digital payment flows, biometric authentication, real-time UI updates, and AI-powered liveness detection — under real-world constraints. A fast learner who thrives under pressure, embraces challenging environments, and brings a strong appetite for continuous technical growth. Passionate about clean, accessible UIs and robust integrations that make financial tools simpler and safer for everyday users.

TECHNICAL SKILLS

Languages:	JavaScript (ES6+), TypeScript, HTML5, CSS3
Frameworks / Libs:	React.js, Next.js, React Native, Tailwind CSS, MediaPipe
State & Data:	React Context API, custom hooks, REST API integration, localStorage
Tooling:	Git & GitHub, Capacitor (iOS/Android), Postman, VS Code
Auth & Security:	WebAuthn / Biometric Login, 2FA flows, PIN lifecycle management
File Generation:	Client-side PDF, CSV & XLSX export
Currently Learning:	Node.js backend, advanced TypeScript patterns, system design

PROFESSIONAL EXPERIENCE

Frontend Engineer

2025 – Present

MSME Labs · Lagos, Nigeria

- Core frontend engineer on a **fintech web application** for a Lagos-based startup, building and maintaining multiple user-facing modules from design to deployment.
- Engineered end-to-end **digital payment flows** — including P2P wallet transfers and bank payouts — covering recipient lookup, beneficiary management, PIN confirmation, and real-time balance updates.
- Implemented a comprehensive **authentication system**: biometric login (WebAuthn), two-factor authentication (2FA) token lifecycle, first-login routing, PIN creation/confirmation, and one-time device registration using Capacitor Preferences.
- Built a **Notifications module** with optimistic UI updates for instant perceived performance, and a Profile Settings page handling multiple API update flows simultaneously.
- Delivered **Account Statement downloads** with fully client-side generation of PDF, CSV, and XLSX formats — removing server dependency and improving load times.
- Established and maintained **API integration standards** across the codebase — custom auth hooks, consistent success/error handling, shared UI conventions — significantly accelerating team development velocity.
- Deployed application builds to **iOS and Android** via Capacitor, managing native bridge constraints and resolving platform-specific edge cases.

Software Developer – LiveSense

2024

Personal Project · Lagos, Nigeria

- Sole developer of **LiveSense**, a browser-native facial liveness detection system built with Next.js and MediaPipe Face Landmarker, designed to prevent identity spoofing in remote KYC verification flows.

- Designed and implemented **four real-time liveness checks** (Blink, Turn Left, Turn Right, Smile) using facial landmark tracking, optimising the flow from six checks to four for better UX without sacrificing detection accuracy.
- Built as a fully **client-side, reusable Next.js component** — no external API dependency for inference — deployable across web and mobile contexts.

NOTABLE PROJECTS

Fintech Payments Web Application

Stack: React Native · Next.js · TypeScript · Tailwind CSS · Capacitor

Full-featured digital payments app with wallet transfers, bank payouts, biometric login, 2FA, PIN management, client-side account statements, and real-time transaction history — built for a Lagos-based startup.

LiveSense – Facial Liveness Detection

Stack: Next.js · TypeScript · MediaPipe Face Landmarker · Tailwind CSS

Real-time browser-based KYC liveness tool with four-challenge detection (blink, head turns, smile), built entirely client-side with no backend required for inference.

Developer Portfolio Site

Stack: Next.js · TypeScript · Tailwind CSS · Resend API

Personal portfolio with project showcases, animated UI, and a fully functional contact form powered by Resend email integration.

KEY ATTRIBUTES

- | | |
|----------------------------------|---|
| • Fast Learner | Self-taught advanced React patterns, MediaPipe ML APIs, and Capacitor native deployment independently while delivering features on tight timelines. |
| • Performs Under Pressure | Consistently shipped authentication systems, payment flows, and security-sensitive features on deadline without disrupting application stability. |
| • Open to Growth | Actively expanding into backend development (Node.js), system design, and cloud infrastructure to become a more complete engineer. |
| • Detail-Oriented | Identifies and resolves subtle UI bugs — hook errors, image flickering, API mismatches — that others overlook, maintaining high-quality user experiences. |
| • Collaborative | Documents code standards and integration patterns that uplift team productivity; communicates technical trade-offs clearly across teams. |
| • Problem Solver | Designs pragmatic workarounds when constraints exist — e.g. client-side data bridging for API gaps — demonstrating sound engineering judgement. |

EDUCATION

B.Sc. Agriculture
University of Ilorin · Kwara, Nigeria

2025
